Designed the CODOC documentation system
Developed the GEAC library system
Lectured and acted as consultant to library planners in academic, government, school and public libraries throughout Canada, the United States, New Zealand, Australia, Saudi Arabia and Sweden.

Comments:

"In the early 1950's pregnant with her first child, she 'hid' in the basement of a university library cataloguing books, because pregnant employees were supposed to be fired. It was a humble beginning for the woman who would go on to become the chief librarian of the University of Guelph's McLaughlin Library in 1971. As the only woman heading up a university library in Ontario at the time, she was a pioneer." Also, she was internationally known for her work in library planning, innovation in library management and the introduction of technology into libraries. She became internationally respected for her work in library management, automation and building design. She convinced committees and boards that librarians were a valuable and knowledgeable resource when it came to input for building modern library facilities. She saw automation as a valuable path for the future of libraries and led the way. She worked with architects on a new library building and pursued her vision of an automated library system despite critics who believed automation was nothing more than an 'expensive toy'. During her career she spoke and published widely acting as a consultant in the design of libraries throughout Canada and the world. She was the 1st Canadian and 1st woman to receive an honorary professorship from the University of Essen, Germany, and the first Canadian to receive the American Academic Librarian of the Year Award. She served on a number of provincial, national and

international library bodies as a member, advisor or on the executive.”
